L7 ANSWER 1 OF 1 CAPLUS COPYRIGHT 2004 ACS on STN

AB Entomopoxviruses (EPV) carrying heterologous genes integrated into non-essential regions of their genomes are described for use in biol. insecticides and in the manufacture proteins and peptides in cell culture. The preferred **virus** is Heliothis armigera EPV (HaEPV) and the preferred sites of integration are the p11.5 open reading frame, the thymidine kinase gene, the spindle protein gene, and the intergenic region. Cloning and characterization of the HaEPV genome and its products is described. Transfer vectors based on a large BglII fragment of the viral genome were constructed and used to introduce the GUS gene into the intergenic region between the p11.5 ORF and the spindle protein gene. The preparation of viruses carrying genes for an antibody to the influenza **virus** neuraminidase or a gene for the juvenile hormone esterase of Heliothis virescens were demonstrated.

L10 ANSWER 3 OF 12 CAPLUS COPYRIGHT 2004 ACS on STN

AB A review discusses the **insect** baculovirus and entomopoxvirus gp37/**fusolin** genes, which encode GP37/**Fusolin** proteins that form spindle bodies (SBs).. SBs formed by **Fusolin** and purified **Fusolin** protein can improve the sensitivities of target insects to baculoviruses. It was proposed that GP37 proteins, like **Fusolin**, have an accessory function that is not required for viral replication and it may be possible to adapt the function of GP37/**Fusolin** for human advantage by using the presence of increased or alternate GP37/**Fusolin** proteins as "adjuvants" for viral biopesticides.

L10 ANSWER 5 OF 12 CAPLUS COPYRIGHT 2004 ACS on STN

AB The **fusolin** (fus) gene of Choristoneura fumiferana entomopoxvirus was cloned and expressed in **insect** cells via the baculovirus expression vector system using the polh promoter. A PstI / EcoRI restriction enzyme fragment (1115 bp) which includes the fus gene was cloned into pBlueBac4.5. This engineered plasmid and linearized DNA of Autographa californica nuclear polyhedrosis virus (AcNPV) were cotransfected into Spodoptera frugiperda cells. Selection and purification of high level recombinant baculovirus were performed by polymerase chain reaction and plaque assay. Expression of the **fusolin** protein (approx. 38 kDa polypeptide) in S. frugiperda cells was determined by SDS-PAGE.

L10 ANSWER 7 OF 12 CAPLUS COPYRIGHT 2004 ACS on STN
AB Plants are disclosed which are capable of expressing, in a tissue or tissues susceptible to damage by feeding insects, an exogenous protein(s) such as **fusolin** or a **fusolin**-like protein, to reduce damage to the plant by inhibiting feeding, growth and/or development of insects. Feed baits comprising spindle bodies, spindle-like bodies or constituent protein(s) thereof which inhibit feeding, growth and/or development of insects are also disclosed. Fusolins are shown to be effective antifeedants for larvae of a number of **insect** pests.

L10 ANSWER 9 OF 12 CAPLUS COPYRIGHT 2004 ACS on STN
AB The invention provides an infectious, spindle body-producing recombinant entomopoxvirus, particularly *Heliothis armigera* (HaEPV), wherein heterologous DNA is inserted within the intergenic region between the **fusolin** gene and the p68 gene. The heterologous DNA used in the methods of the invention may encode insecticidal toxins, **insect** neurohormones, and neurohormonal-interacting proteins. Recombinant entomopoxviruses comprising such heterologous DNA are useful for controlling the proliferation of pest insects. The heterologous DNA may also encode biol.-active proteins, such as interferons, tissue plasminogen activator, lymphotoxin, insulin, human growth hormone, etc. Recombinant entomopoxviruses comprising such heterologous DNA are useful in the production of desired biol.-active proteins, polypeptides and peptides in cell culture.

 AB The gene encoding the most abundant protein of purified preparations of Heliothis armigera entomopoxvirus (HaEPV) has been cloned and sequenced. The gene sequence encodes a 40.1K polypeptide with a putative N-terminal

20 amino acid leader peptide, and a single potential N-glycosylation site. Analysis of the protein, which has an apparent Mr of 50K on polyacrylamide gels, confirmed post-translational loss of the leader peptide, but showed no evidence of glycosylation. The protein is related to others previously described from *Choristoneura biennis* EPV (63% identity) and *Autographa californica* nuclear polyhedrosis **virus** (42% identity). Polyclonal antiserum raised against a bacterial fusion protein containing the majority of the HaEPV protein specifically labelled HaEPV **spindle bodies**; confocal laser scanning microscopy suggests that the protein is distributed throughout those viral structures.

L19 ANSWER 1 OF 6 CAPLUS COPYRIGHT 2004 ACS on STN DUPLICATE 1
TI Assessment of foreign protein production by recombinant Heliothis
(Helicoverpa) armigera entomopoxviruses in Spodoptera frugiperda cells

L19 ANSWER 2 OF 6 CAPLUS COPYRIGHT 2004 ACS on STN DUPLICATE 2
TI Insect-virus relationships: sifting by informatics

L19 ANSWER 3 OF 6 CAPLUS COPYRIGHT 2004 ACS on STN
TI Baculovirus fusolins as antifeedants and their use in the development of
insect resistant plants

L19 ANSWER 4 OF 6 AGRICOLA Compiled and distributed by the National
Agricultural Library of the Department of Agriculture of the United States
of America. It contains copyrighted materials. All rights reserved.
(2004) on STN DUPLICATE 3
TI Spindle bodies of Heliothis armigera entomopoxvirus develop in structures
associated with host cell endoplasmic reticulum.

L19 ANSWER 5 OF 6 CAPLUS COPYRIGHT 2004 ACS on STN
TI Infectious, spindle body-producing recombinant entomopoxvirus, and uses
thereof for controlling the proliferation of pest insects and/or producing
biologically-active proteins

L19 ANSWER 6 OF 6 CAPLUS COPYRIGHT 2004 ACS on STN
TI Recombinant entomopoxvirus
